Projects

SideShelf

- Built SideShelf, a system-wide Android overlay app in Kotlin that provides real-time clipboard history for text and images, accessible from any screen.
- Implemented a background service using windowManager and SYSTEM_ALERT_WINDOW permission to render a custom side-tray UI above all applications.
- Integrated ClipboardManager listeners to detect and persist clipboard changes, supporting structured storage, item deletion, and bulk clearing.
- Designed a lightweight, low-latency UI using XML + programmatic logic, handling lifecycle, overlay permissions, and background execution constraints.

Project Lead: AudAuto – Automated Web Audit Tool

- Developed **AudAuto**, a browser-based web auditing tool that analyses sites for performance, SEO, accessibility, and best practices, providing actionable recommendations for improvement.
 - Implemented **automated Lighthouse integration** to detect failing issues, store JSON results, and generate user-friendly guidance using LLMs.
 - Optimized auditing workflow with smart caching, reducing redundant scans by reusing results when no code changes were detected.
 - Built a modular backend in **Next.js + Node.js** enabling category-specific analysis, custom prompts, and detailed reports for developers, clients, and non-technical stakeholders.
-

Skills

Frontend: React, Next.js, Tailwind CSS, Zustand, Framer Motion

Backend: Node.js, Django, Spring Boot, Firebase, SQLite

Languages: C/C++, Java, Kotlin, Python, JavaScript, TypeScript

Tools and Design: Git/GitHub, Android Studio, Vercel, Postman, MongoDB Atlas, Render

Soft skills: Fast learner, Team management, Problem-solving.

Education

2025 - 2030

- Computer Science and Engineering (Integrated MTech 5 year) – SSN College of Engineering

CGPA - 8.7/10
